IBM **TechXchange**

Maximo AI Service and IBM Bob

Session 1171

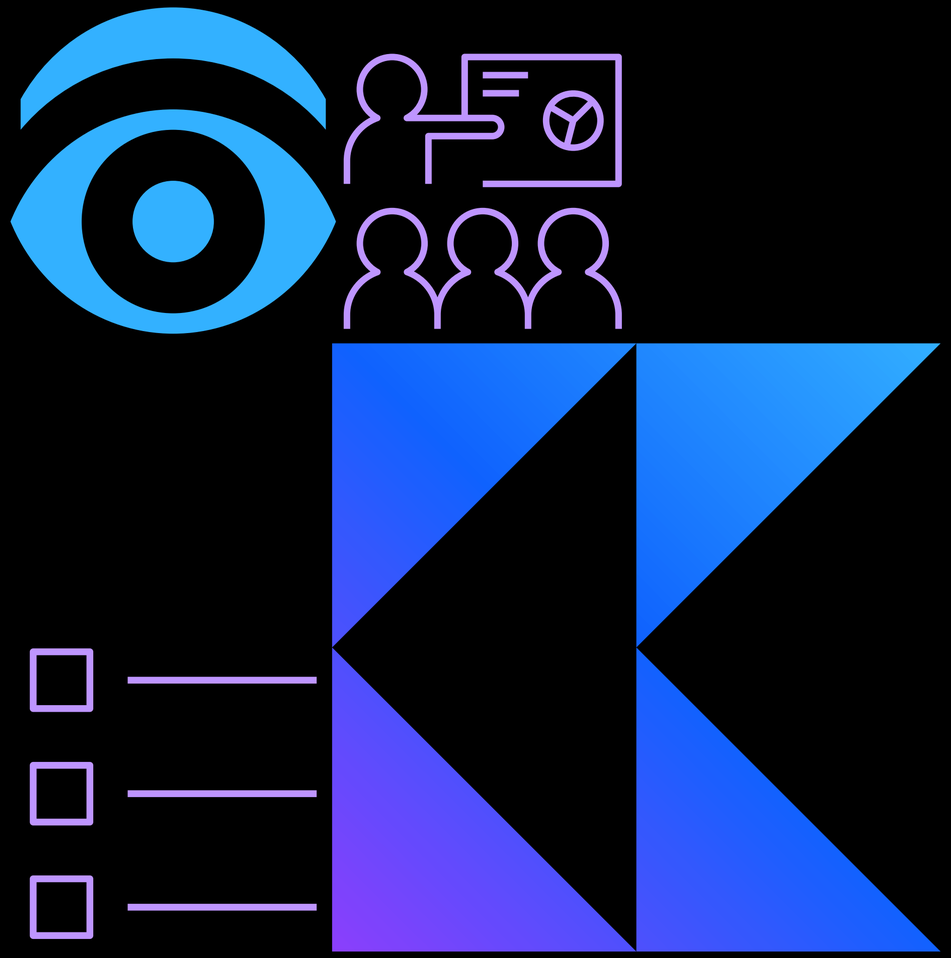

A visual tour and hands-on experience of seven AI capabilities in MAS Manage 9.2 plus IBM Bob

Arif Ali / Miryam Kofman - IBM Partner Ecosystem

Atlanta, GA
October 26–29

Table of Contents

Seven practical AI tools for Maximo 3

Logs analysis 11

Maximo MCP server overview 12

AI agent harness/scaffolding (Bob) 13

IBM Bob with IBM Maximo 14

Value for end-users and developers 15

Drive AI yourself: Hands-on Lab 16

Seven practical AI tools for Maximo

Problem Code Classification

Suggest the likely cause from the description.

Let AI find problem code

Recommend 01

Work Order Similarity

Reuse related historical repairs.

Let AI recall similar work

Recall 02

Chat Assistant

Query Maximo in natural language.

Ask AI and let it query Maximo data

Ask 03

FMEA Strategy Assistant

Structure failure-mode thinking.

Let AI generate an FMEA strategy

Plan 04

Asset Insights Generator

Summarize asset condition and recommendations.

Let AI analyze asset condition

Analyze 05

Alert Insights

Explain an alert and carry actions into a work order.

Turn an alert into work

Act 06

IBM Docs Assistant

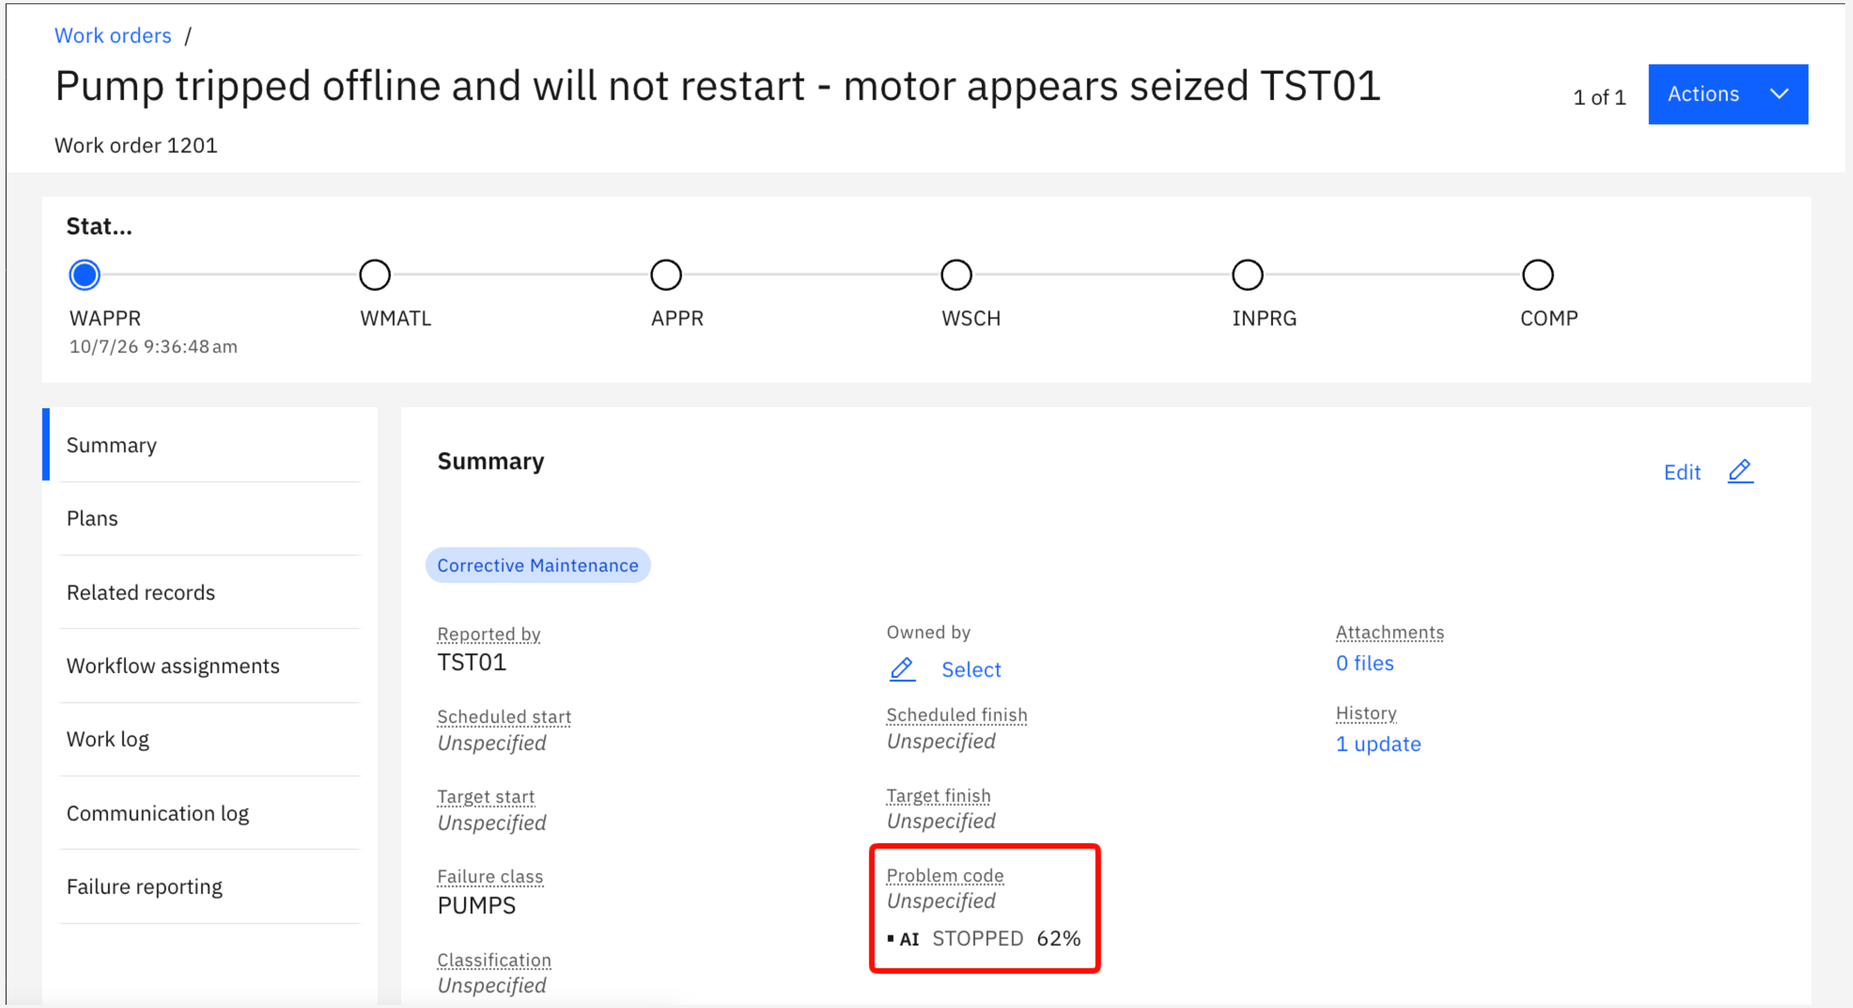

Ground answers in product documentation.

Search IBM documentation

Learn 07

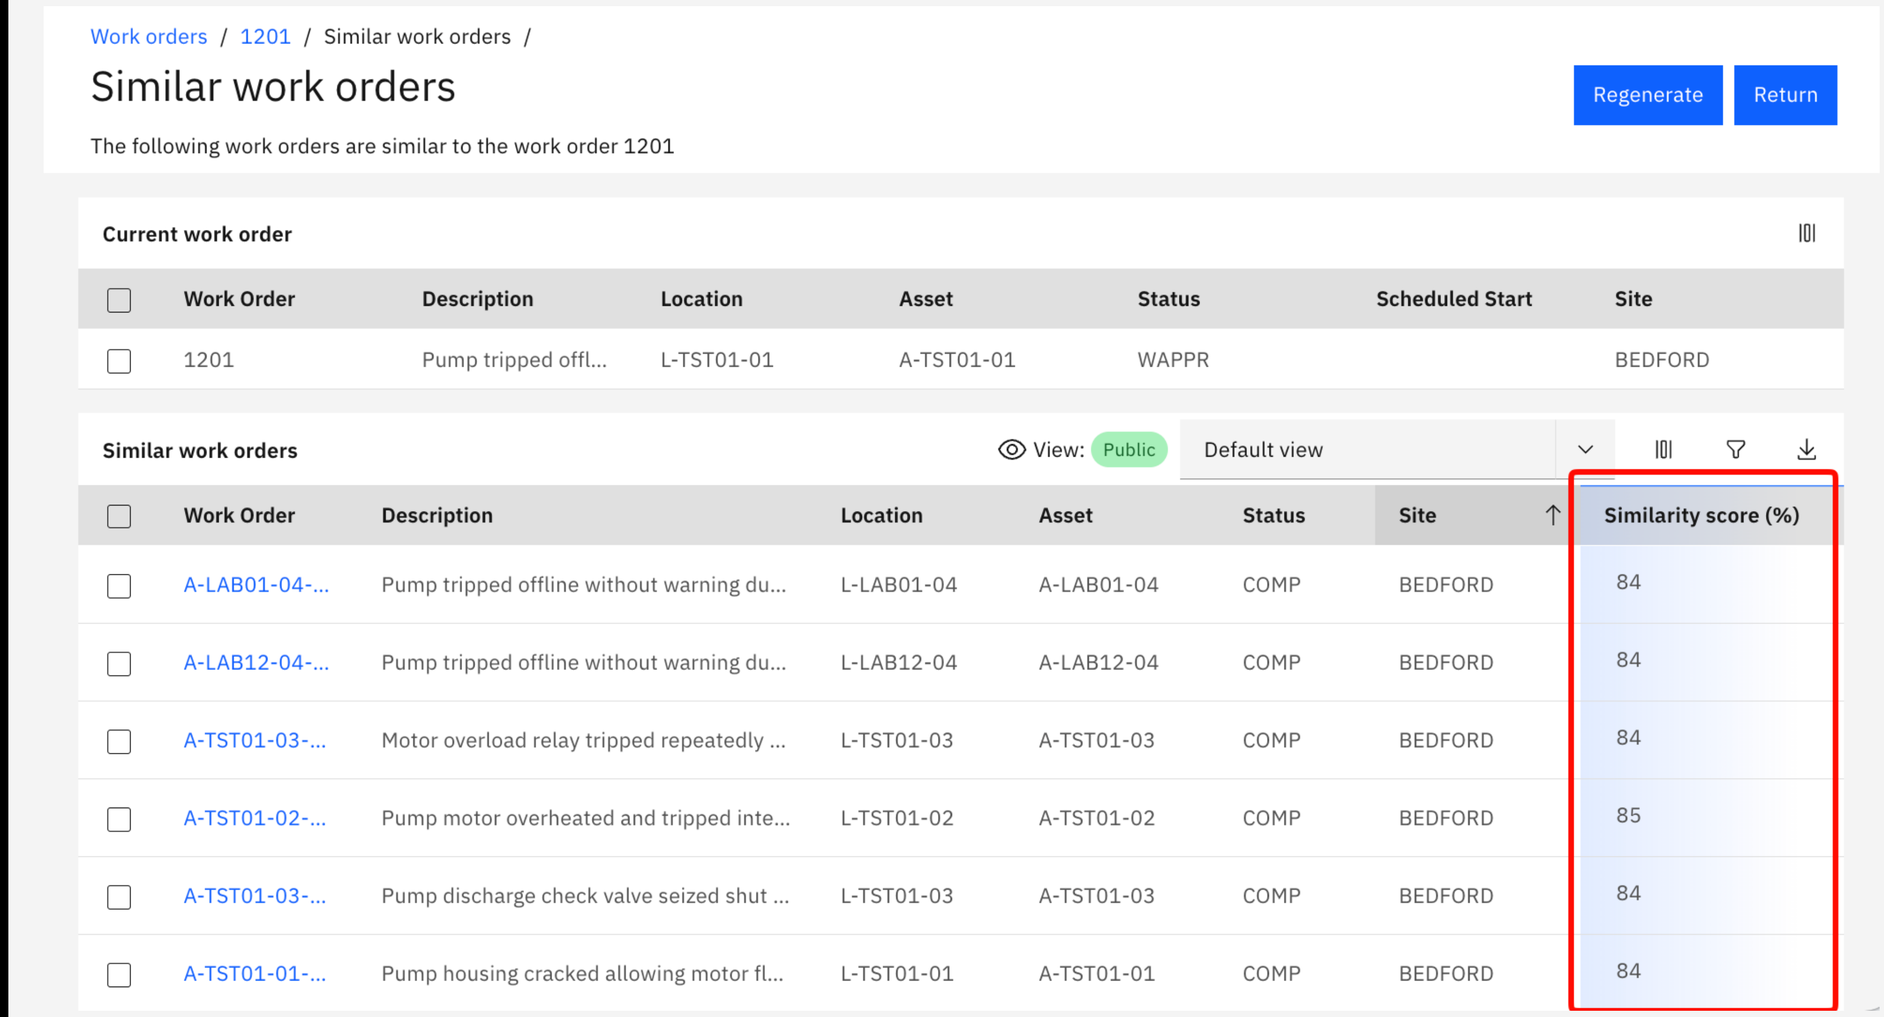

Describe the symptom

AI proposes a problem code and confidence score.

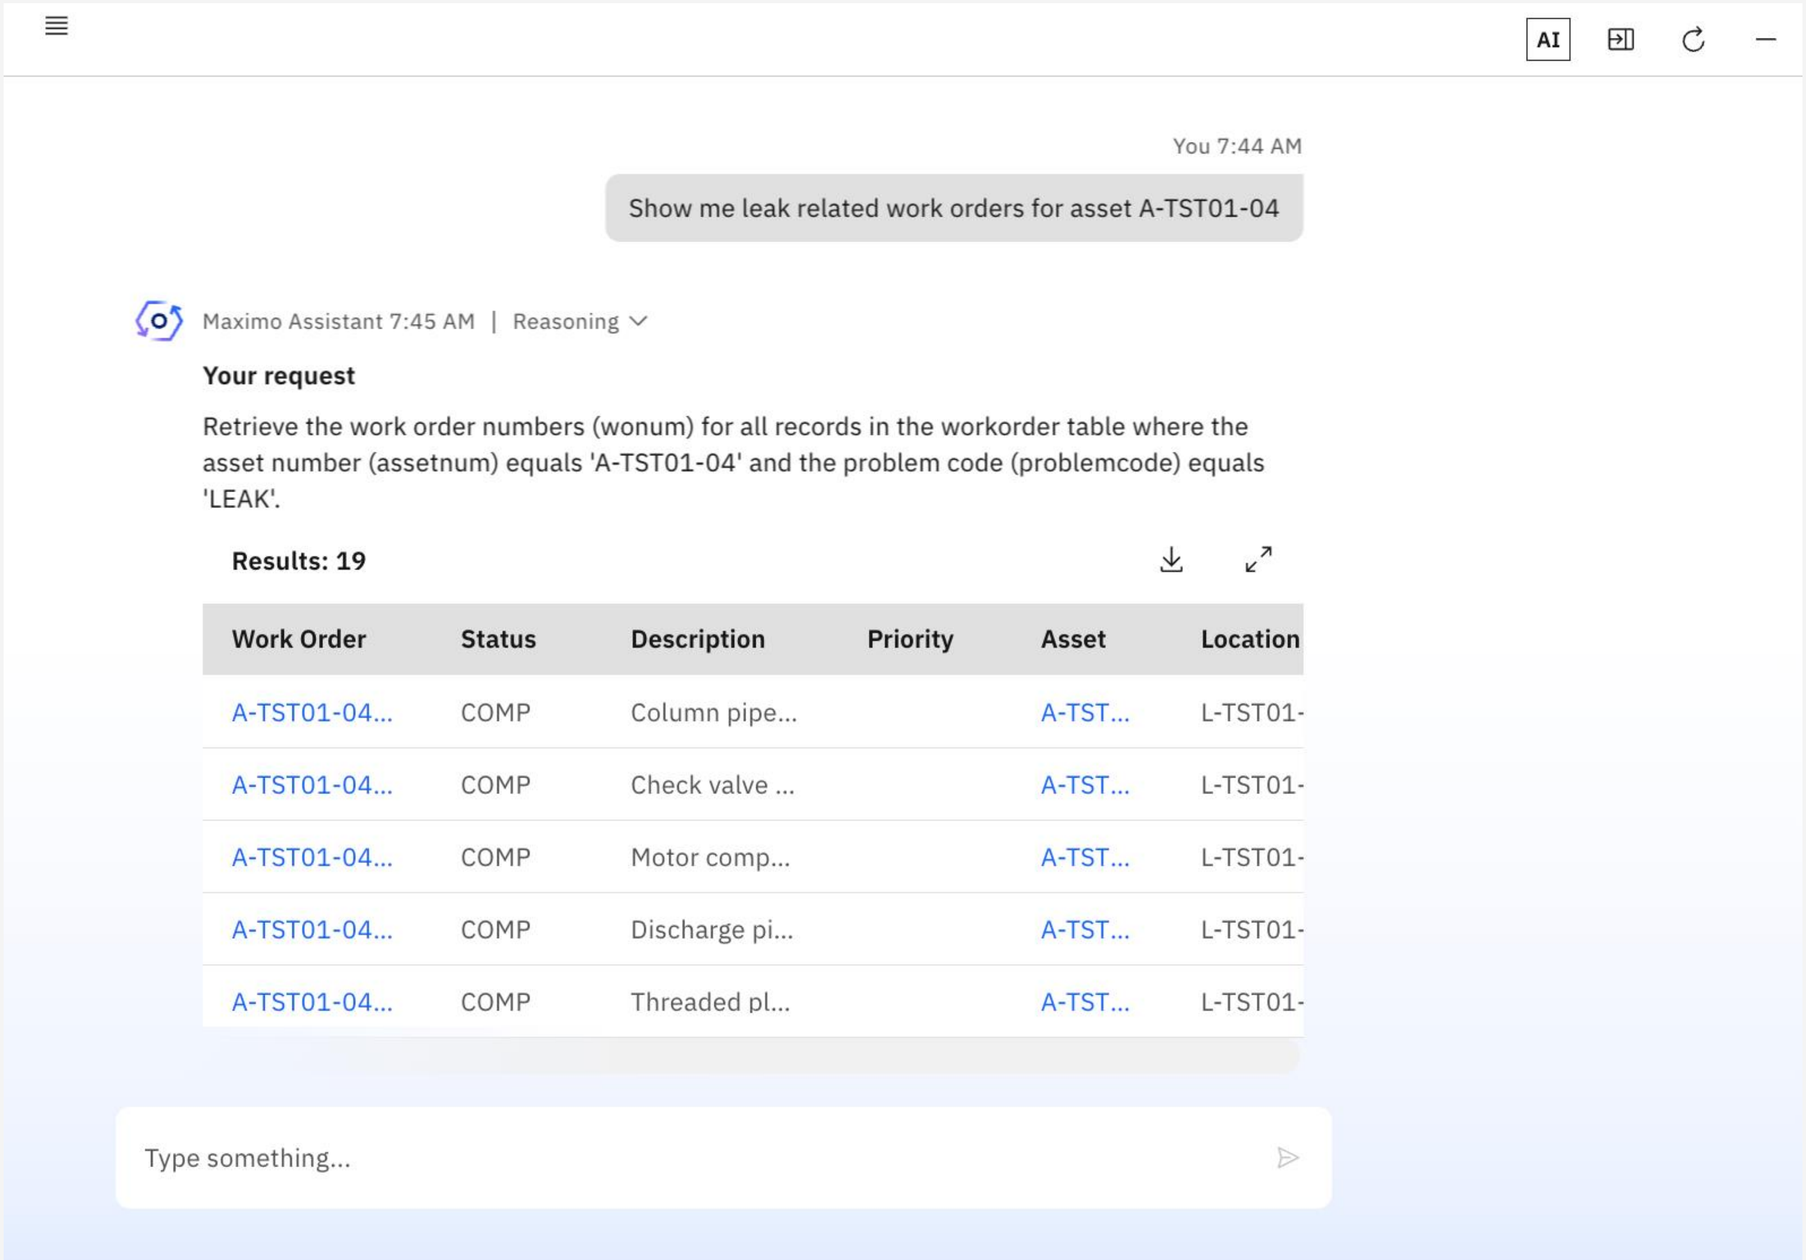

Reuse prior experience

Similar work connects the current issue to past repairs.

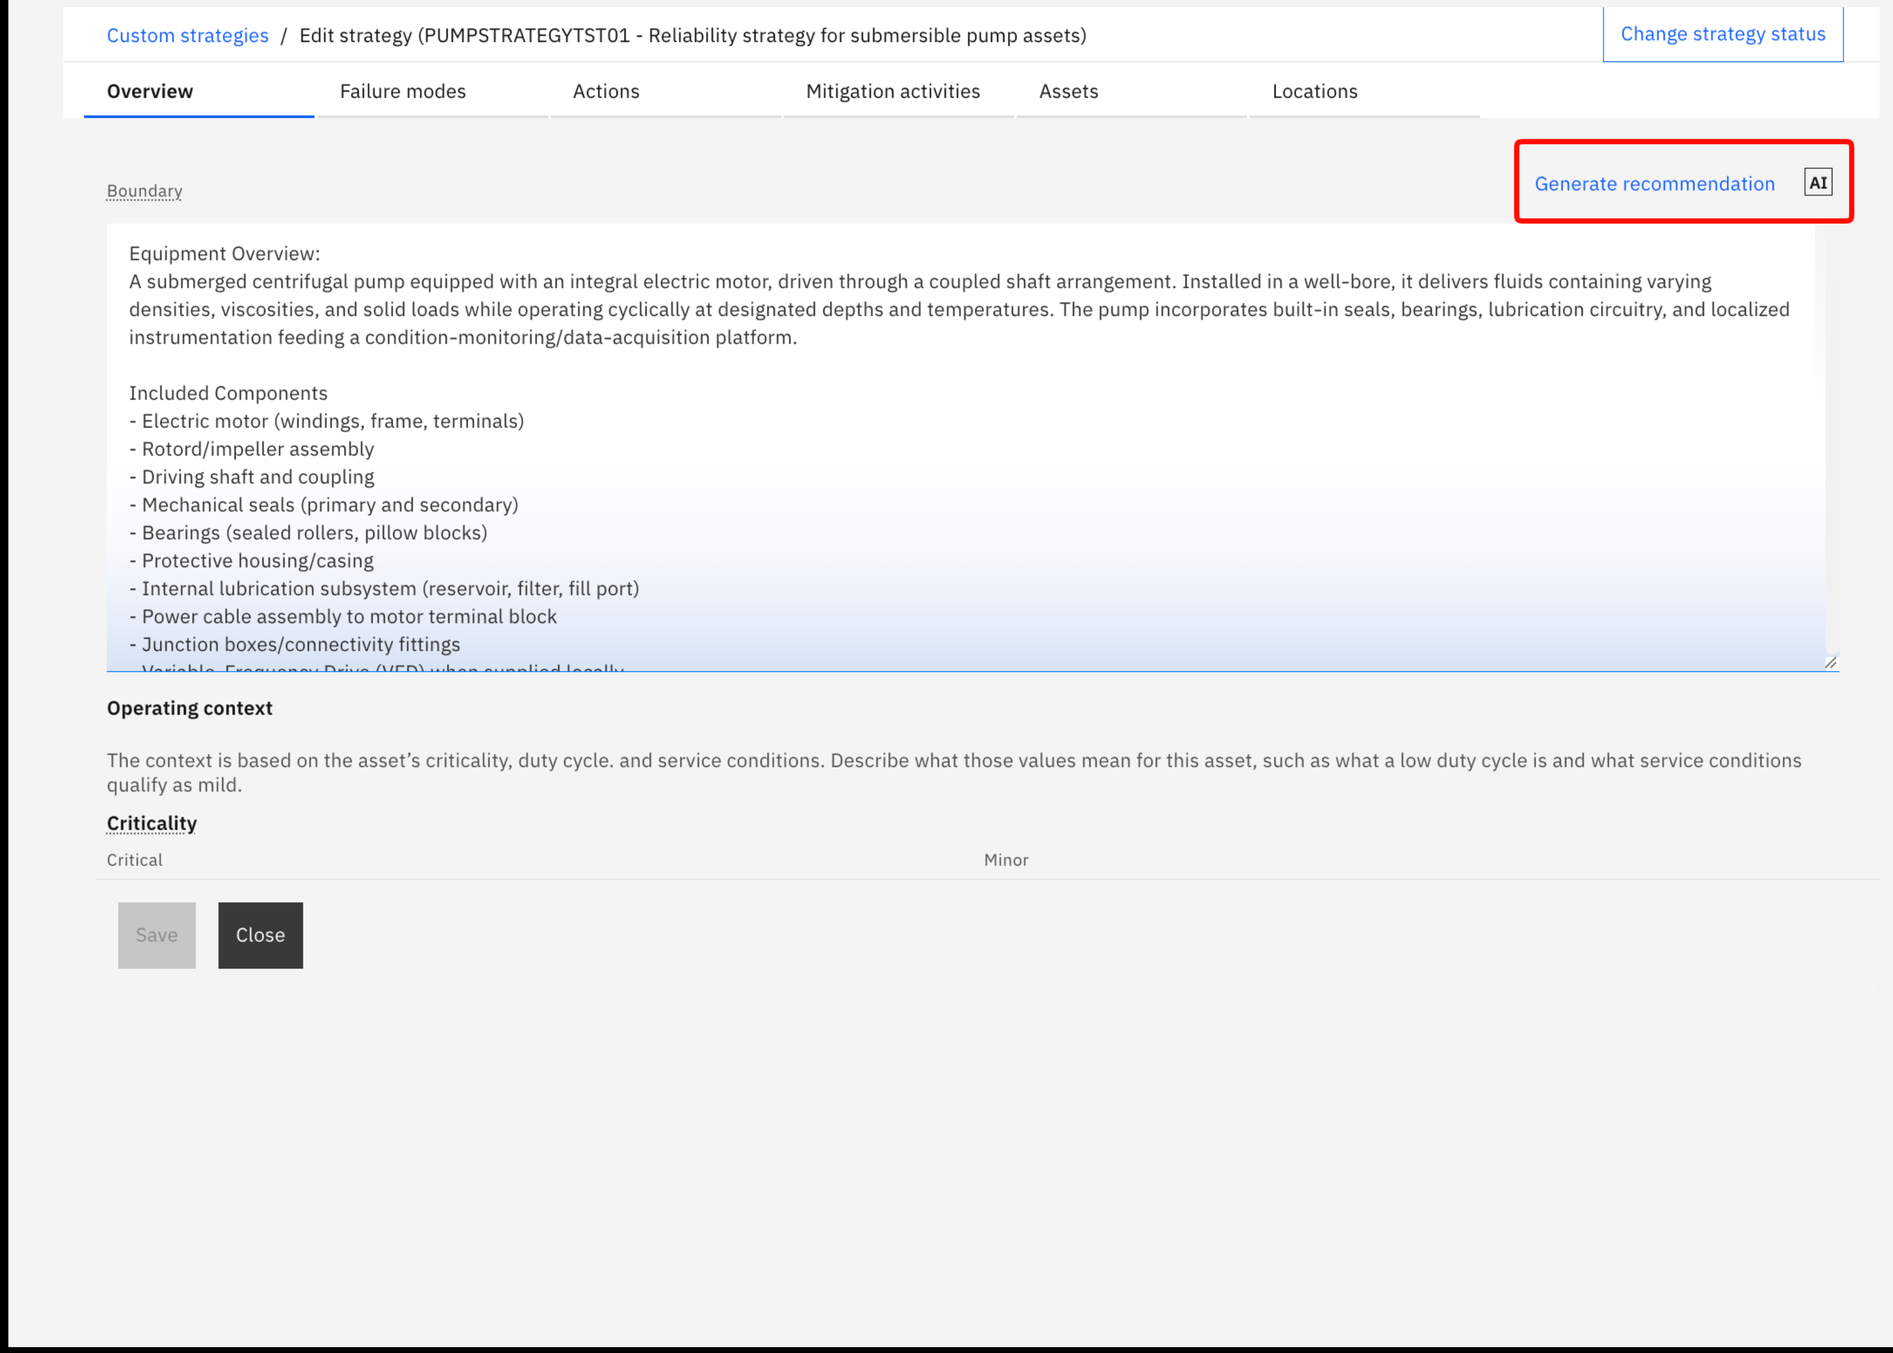

Ask the system

Natural-language questions return Maximo records and aggregations.

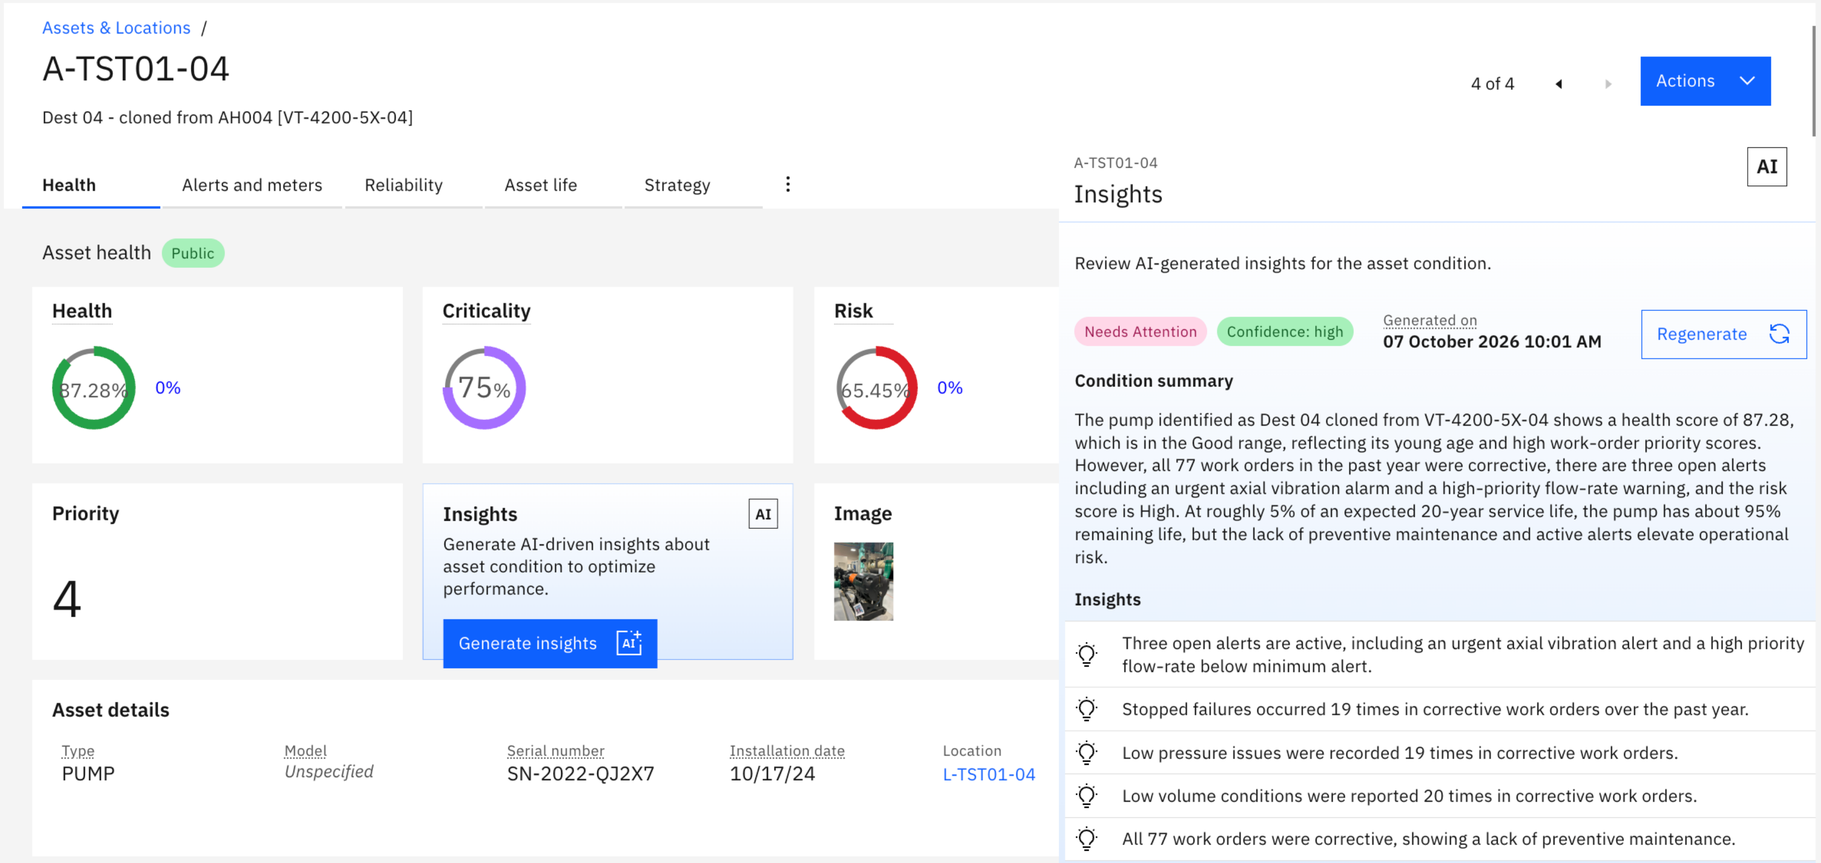

FMEA Strategy Assistant

Suggested boundaries and failure modes for practitioner review.

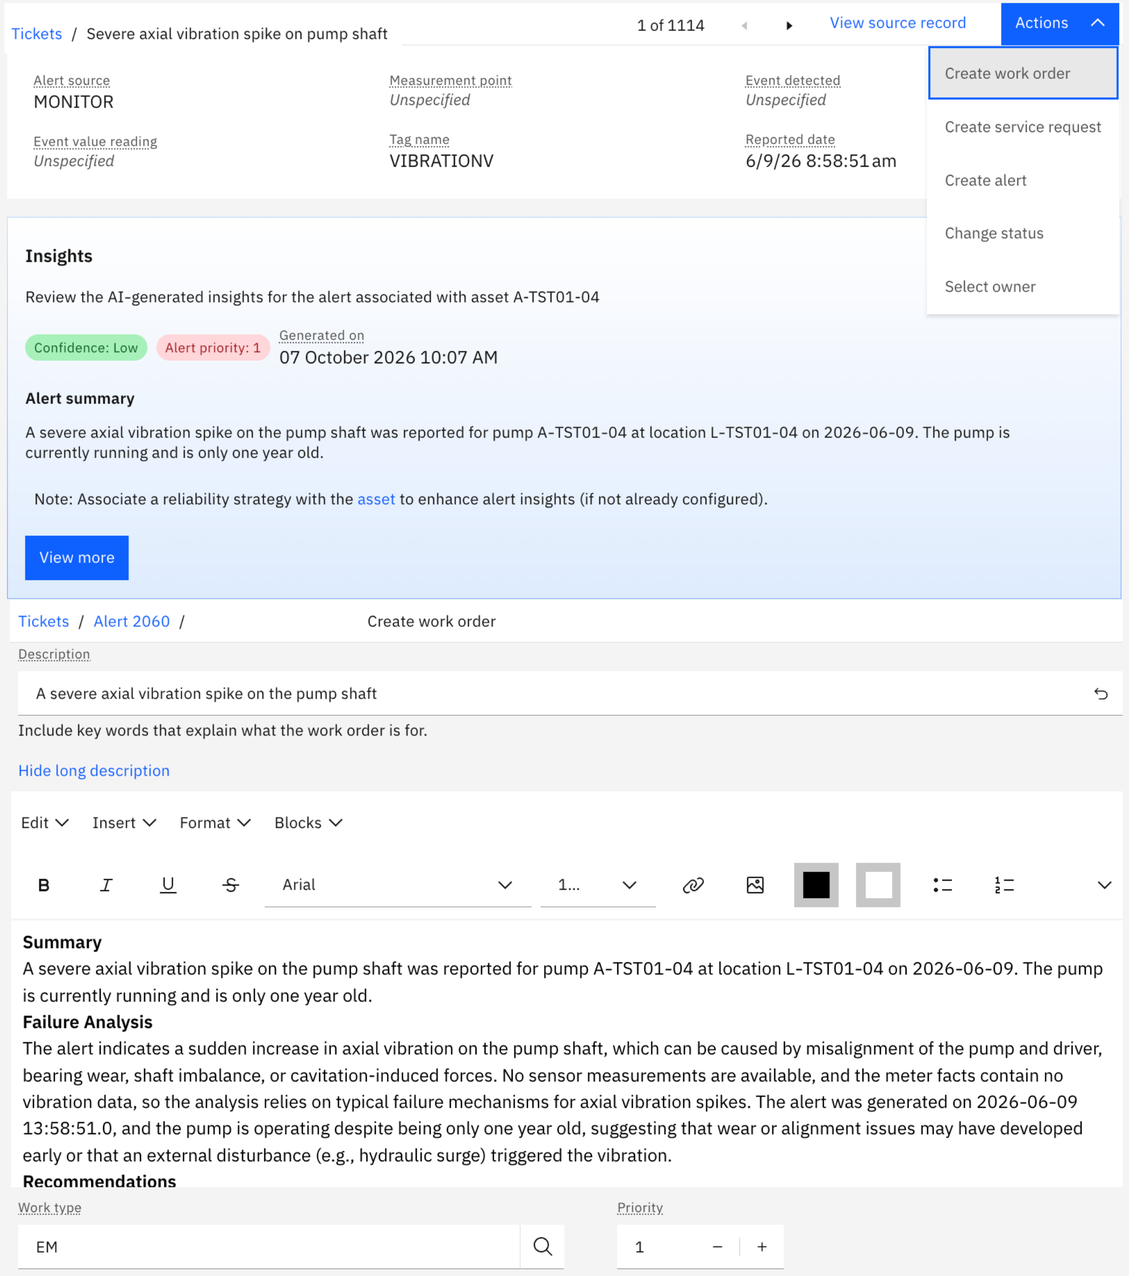

Asset Insights Generator

Condition summary, observations, confidence levels, and prioritized recommendations.

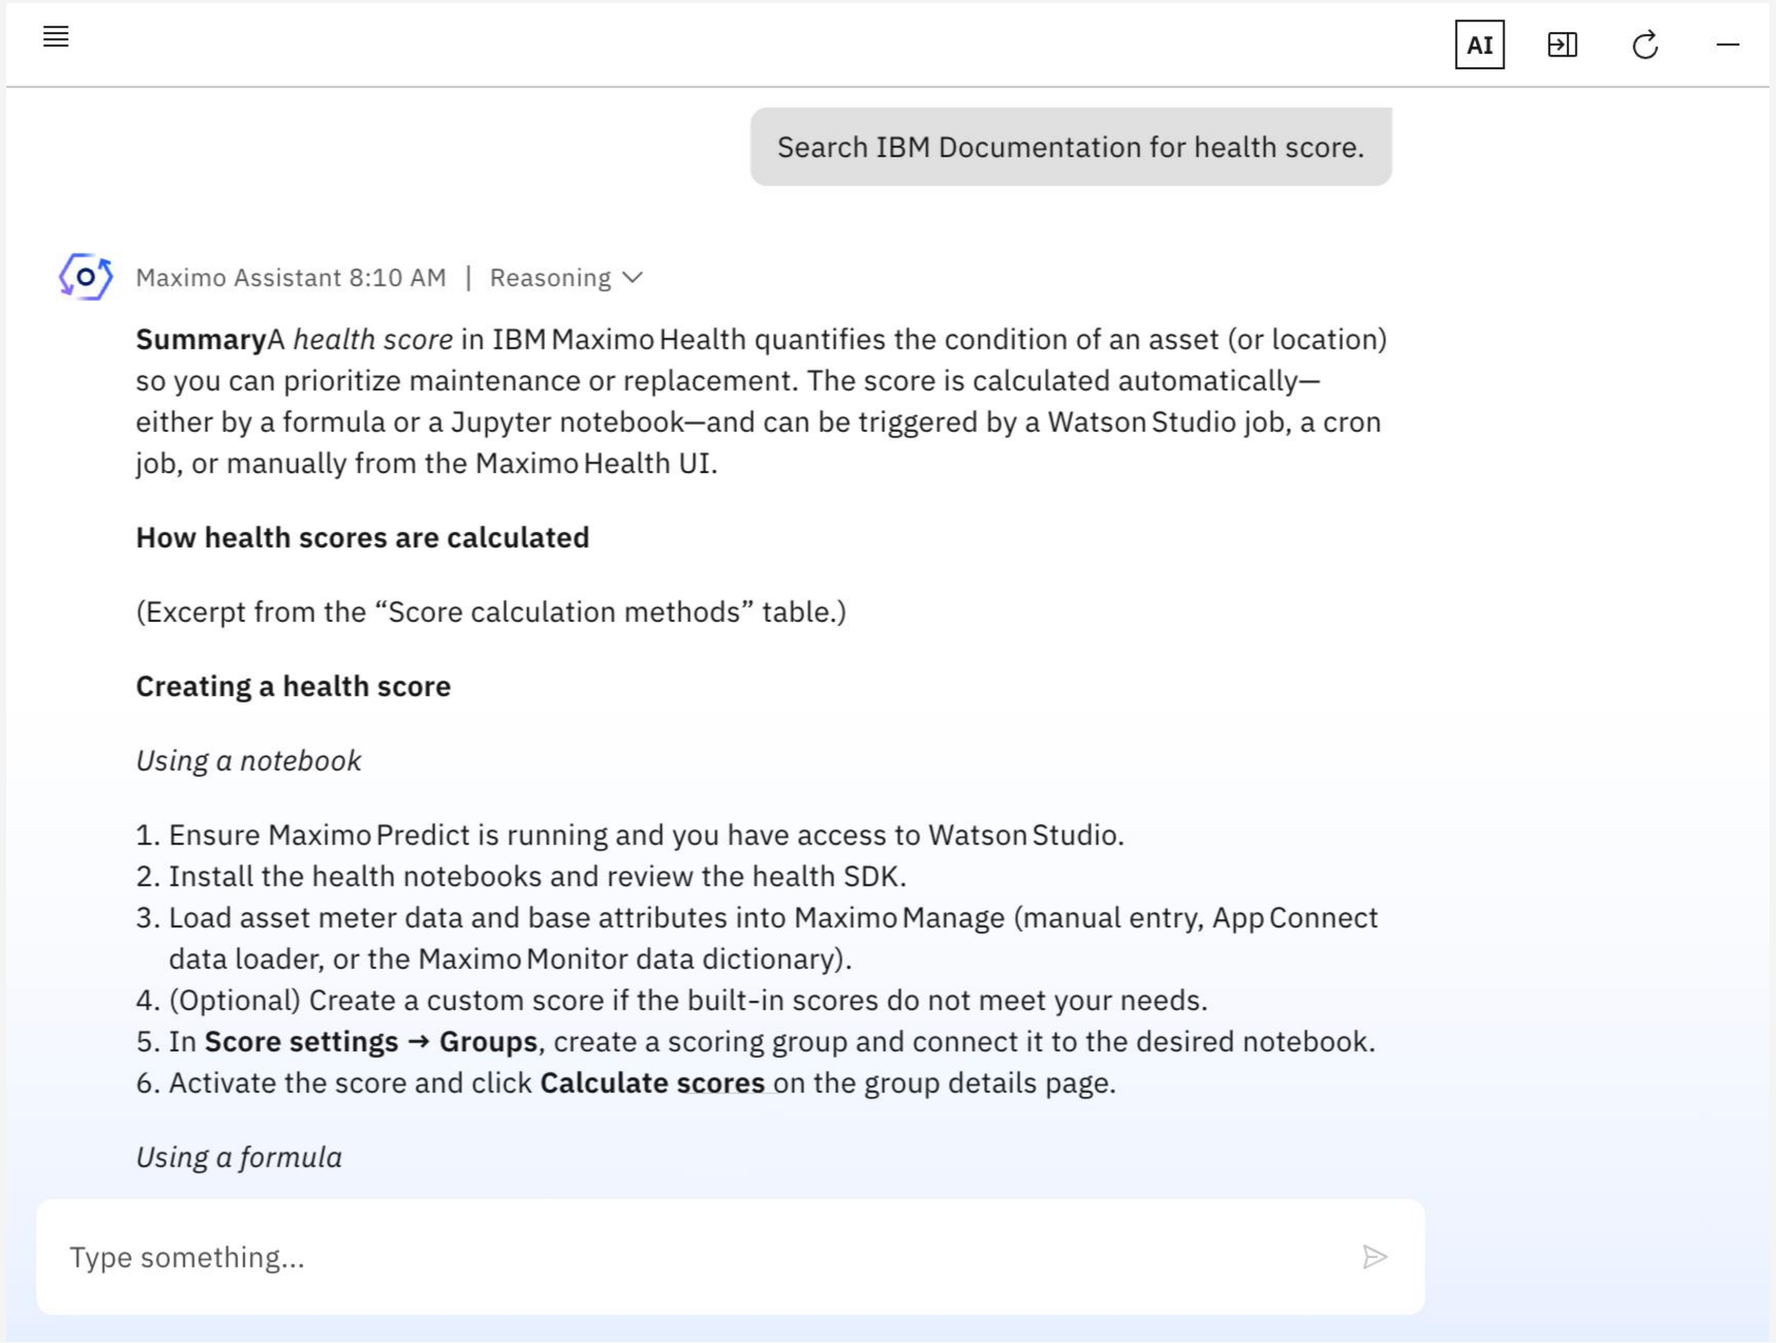

From operational alert to actionable maintenance

The captured workflow shows how a high-vibration alert is enriched with AI analysis before a work order is created.

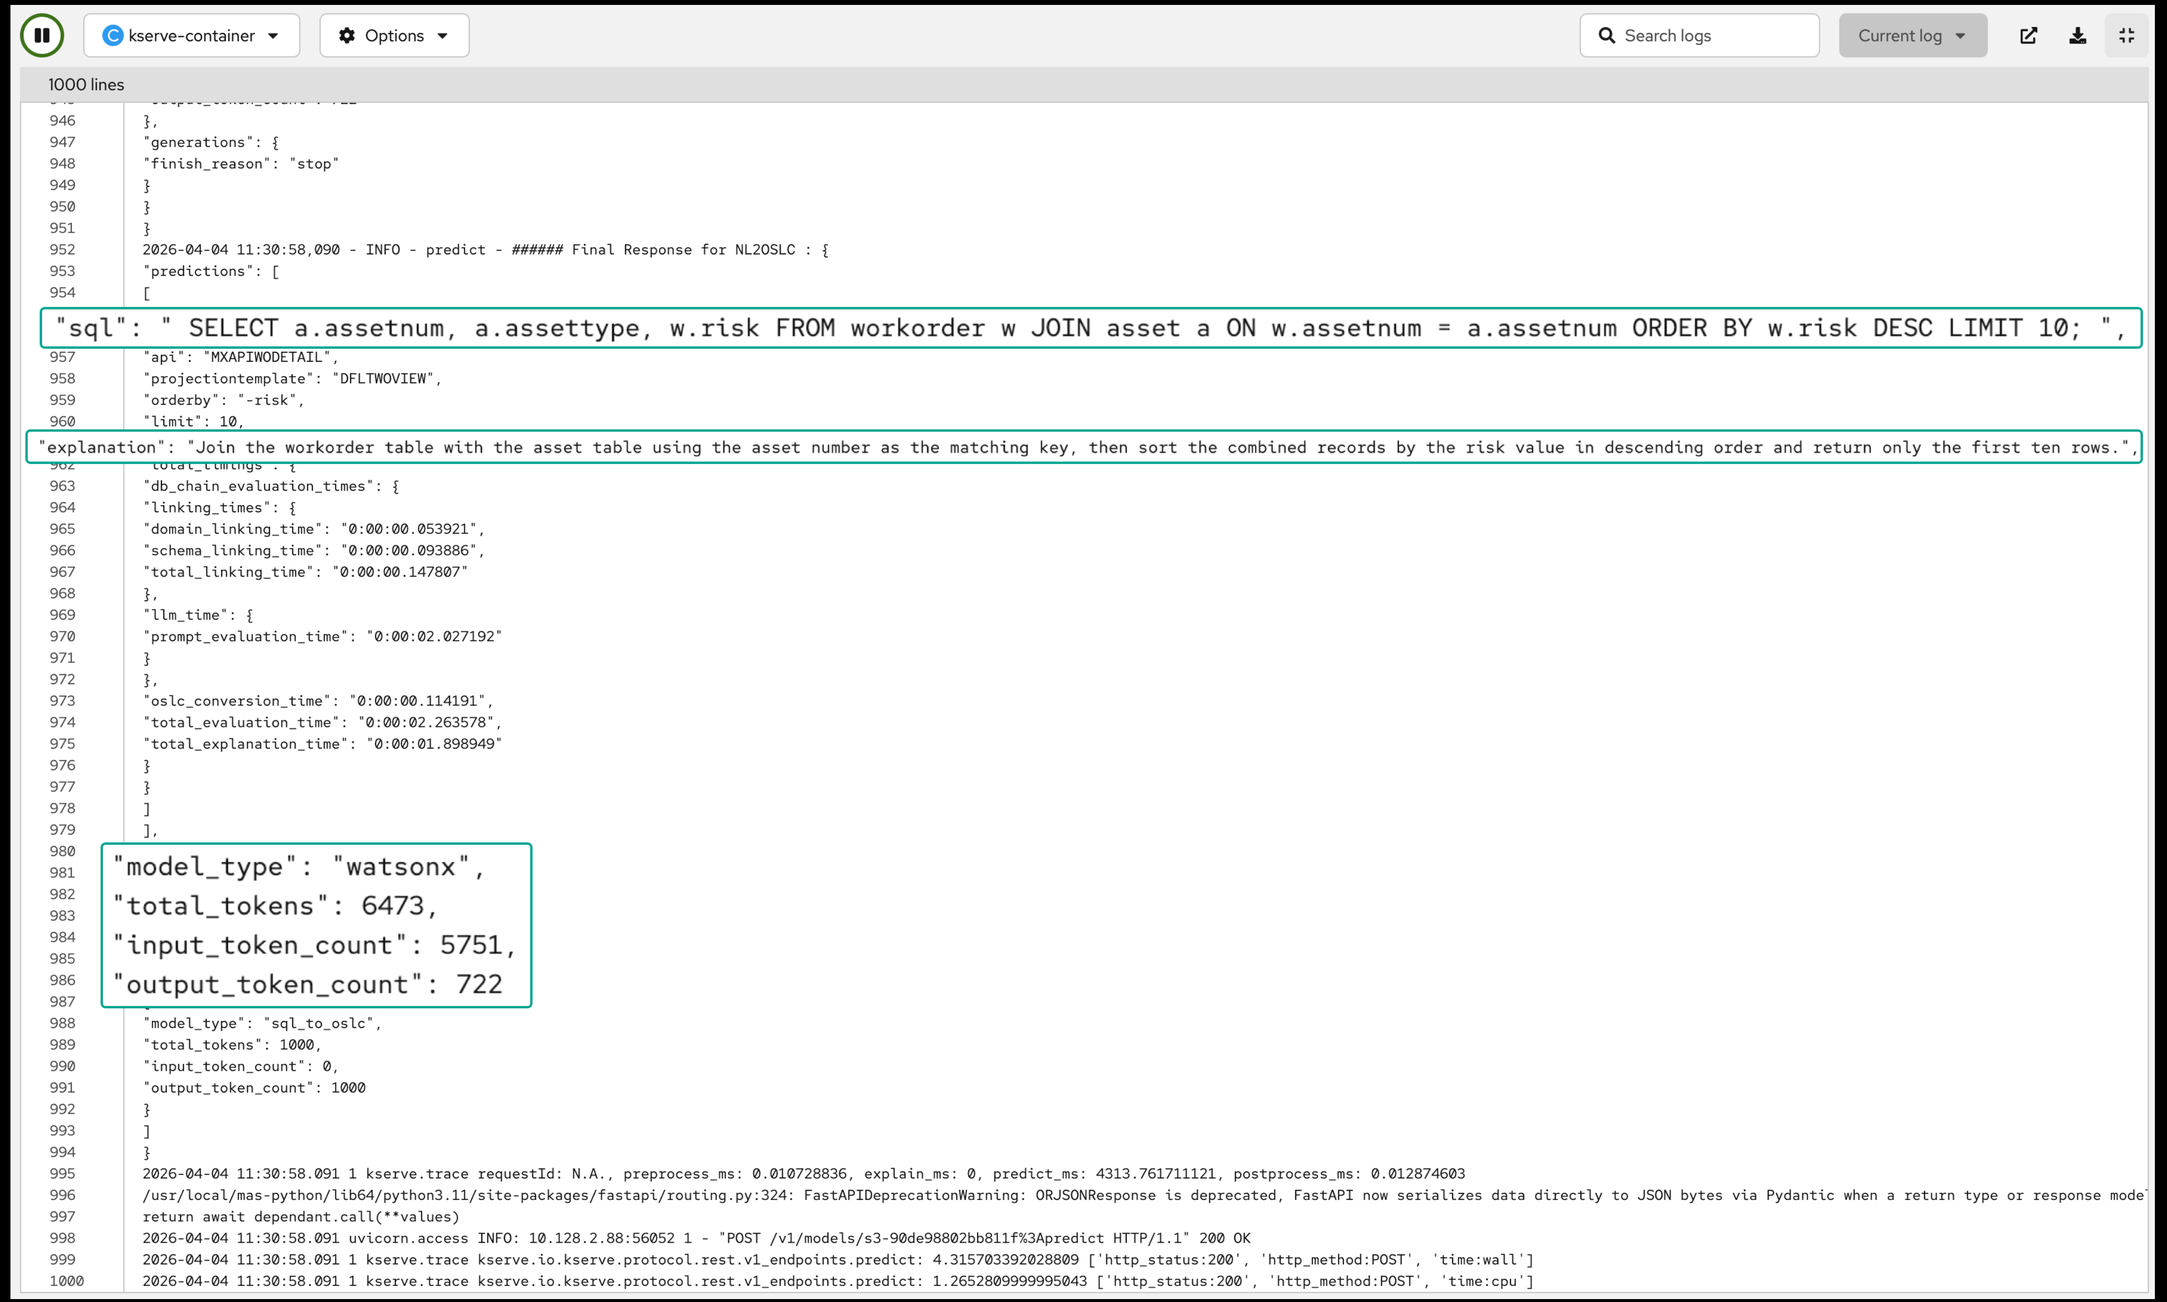

IBM Docs Assistant

Product-focused responses with source links.

OpenShift Logs Analysis

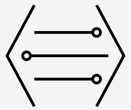

Maximo MCP server overview

AI agents access Maximo through standardized tools: Connect AI agents to Maximo Manage data and functionality.

Agent capabilities

Supports multi-step Maximo Assistant questions in MAS 9.2 and authenticated external agents.

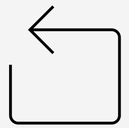

Built-in and custom tools

Uses selected AI configurations and custom tools built from scripts, object structures, workflows or API routes.

Deployment and access

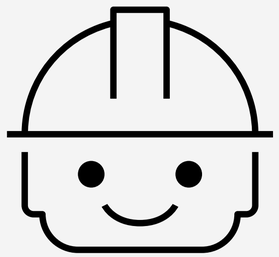

Runs as an OpenShift pod. Environment variables control configuration, with API key or JWT authentication for external agents.

Readiness and tool refresh

Follows Manage readiness. Refreshes tools at startup and polls for updates. Manage remains the source of truth.

Introducing IBM Bob

Build with agents

Focused agents and subagents run work in parallel and handle long-running tasks.

Develop in natural language

Describe what you want. Bob generates the implementation in your codebase.

Work beyond the IDE

Bob Shell supports interactive work, repetitive tasks and CI/CD pipelines.

Bob + Maximo

Bob and Maximo have documented capabilities that can support custom integration.

IBM Bob

External MCP client

Discovers and calls tools from configured MCP servers. Supports Streamable HTTP.

Maximo MCP server

Standardized tool access

Exposes selected AI tools and Manage operations through an OpenShift route.

Maximo Manage

EAM data and operations

Provides business objects, scripts and non-interactive workflows. AI Service enables selected AI features.

Potential value for maintenance teams and developers

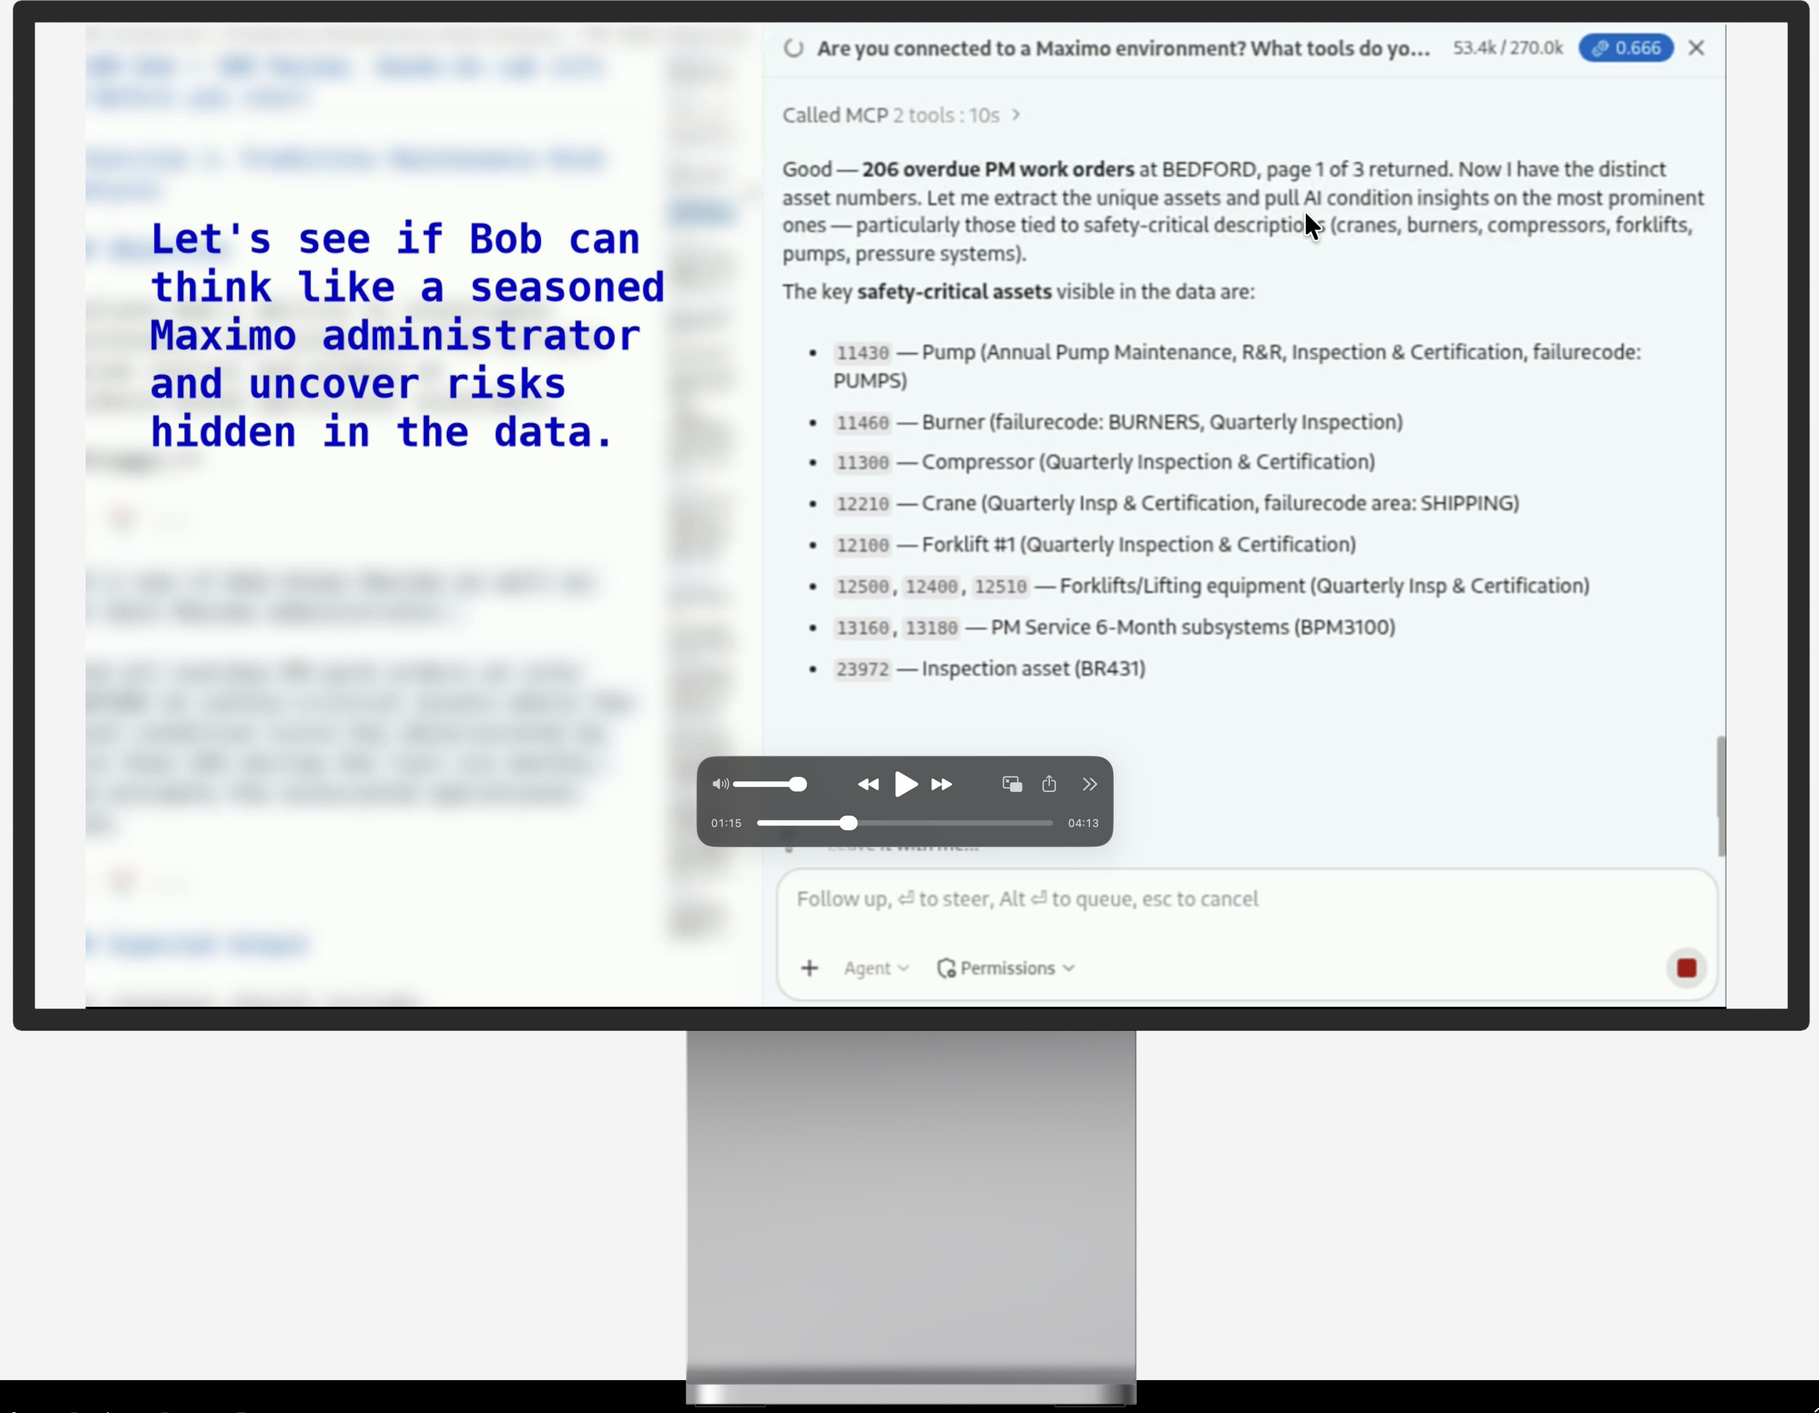

Illustrative scenarios combine Bob’s development support with tools exposed by Maximo MCP.

For maintenance teams		For developers	
Investigate recurring pump failures Combine similar work orders and asset insights into a maintenance brief for planner review.	**Prepare follow-up maintenance** Use exposed tools to create a service request or follow-up work order after human approval.	**Build focused Maximo tools** Use Bob to draft automation scripts, tool schemas and tests against a non-production instance.	**Extend established processes** Expose object-structure actions or non-interactive workflows. Test status rules and failure cases.

Hands-on Lab

IBM Bob + IBM Maximo. Hands-On Lab 1171 for TechXchange 2026

Acknowledgement

Lots of people have contributed towards helping us prepare this hands-on experience.

Software development: Kewei Yang, Tony Tang, Anamitra Bhattacharyya, Jasmin Makwana, Oscar Benedek, Rajan Choudhary, Karol Czarnecki, Divyesh Khokhar, Divya Dinesh, Claudia Elbourn.

Technical Sales: Juan Lopez, Serafina Alhadad, Craig Williams, Nisha Dalal, Quentin Despeisse

Product Management: Erin Buonomo, Steve Hauptman, Michael Dawson, Luke Firth, Stan Smith

Ecosystem: Amanda O'Hara, Sid Mehta, Joanna Raitano, Jacques Guillaume

Tech Zone: Bory Valkova, Brandon Konieczny, Ben Foulkes, David Stacy, Kerry Malland
